

TRAINING PLAN - 100KM CHALLENGE

**AROUND
THE BAY**

YOUR TRAINING PLAN - 100KM CHALLENGE

Welcome to your training programme for Bicycle Network's Around the Bay. KarMEA is proud to be working alongside Bicycle Network to support you in your training for this iconic and challenging event.

100KM SORRENTO - MELBOURNE RIDE FEATURES: COASTAL AND CLOSED ROADS

The 100km Sorrento - Melbourne route will benefit from 17km of coastal riding between Safety Beach and Mornington, arguably the most beautiful stretch of the bay. This will include 6.5km of closed roads (north bound) between Safety Beach and Mount Martha.

Classed as relatively flat, the steepest part of the 100km Sorrento to Melbourne ride option occurs between Mt Martha and Frankston with roughly 2kms of climbing, then just a gradual climbing as you ride out of Mornington and head towards Frankston.

100KM FRANKSTON RETURN RIDE FEATURES: RICKETTS POINT

The 100km Melbourne to Frankston return route is flat, with a few rollers (small bumps) that you may feel in the legs as you make your way back to Alexandra Gardens. Challenge your legs on the longest climb along the route, Ricketts Point.

YOUR TRAINING PLAN

The sessions in this programme are geared to build weekly, increasing mileage steadily, while building your strength and endurance towards your goal distance. Weekday sessions are best completed on a trainer for consistency and maximum gains. Weekend sessions should be completed on the road. Riding in a bunch will be a big part of the event so ensure you are aware of bunch ride etiquette and safety, and practice this in training.

To easily help you, here is a quick guide to some of the terminology you will see in your plan:

CADENCE/RPM :

Although the course is relatively flat, hill work should form an essential part of any training plan. Hill work translates well to power on the flats, increasing your strength and endurance. To enable you to maximise the strength gains from your hill sessions, all your specific hill work should be completed at 60rpm, seated. Focus on relaxed hands and upper body, working from a strong core and driving forwards into the hill with your glutes rather than your quads. If you don't have a cadence sensor then just count the revolutions of one leg for 15secs, it should be 15. Longer rides should be focused on a higher cadence 80-90rpm so you don't load up your legs and blow yourself up!

STRENGTH/FLEXIBILITY:

These should form an important part of your training. Stretch after each session, focus on your tightest muscles, and dedicate 20mins in your rest and cross train days to key muscles stretches. Working on strength enables you to increase power, reduce the risk of injury and become an all-round

more balanced rider. Please refer to the specific sessions at the back of this programme as a guide. If you are working with a trainer, attending classes or taking yourself to the gym the main thing to focus on is single leg work that simulates muscle recruitment during cycling. Look to strength your glutes, quads, calves but don't leave out your upper body as this also plays an important part in riding. Neck, and upper back are important. Your lower back may need strength but you will gain more benefits from focussing on key core stability work and increasing your flexibility in your lower back muscles.

NUTRITION GUIDE:

As a very simple guide, you want to be consuming your body weight in kgs, in grams of carbs PER HOUR on the bike. So if you weight 70kg, you need to be eating 70gms per hour. This can come in the form of bars, sports drink, bananas, gels, dates, baby food! Try it all out BEFORE the event and make sure your tummy is happy with what you are feeding it. Try to either eat or drink something every 10mins, it often works well to alternate. Water should be in one of your bottles on the bike. Drink WATER ONLY with food, sports drinks should be taken alone. If you feel sick, don't sweat it, skip a feed and switch to water until it all settles down.

OTHER HINTS AND TIPS :

Train in the kit you will ride in. Practice load up your jersey pockets prior to the race day to ensure you can fit it all in. Practice changing a flat tyre if you aren't confident. Ensure you are running the right tyre pressure for the event. If you have drop bags for food stops, ensure you work out what you want to put in them well before the race.

TRAINING TO HEART RATE AND EFFORT LEVELS

Training to heart rate allows you to get maximum gains from your training. We find many athletes work to low in key sessions, and train to high on their longer distance rides, desperate to get the miles in! Programmed recovery or easy spin sessions should be completed at an steady state heart rate. If you don't have a heart rate monitor, then we have included in the chart below a guide for perceived effort. You can keep it simple with easy, medium and hard as your guides. Easy is a pace you can easily talk at (recovery, warm up, steady state, and cool down). Medium pace talking becomes a little breathless, you are applying yourself in these sessions (hill and endurance work). Hard efforts are more of a yes no answer level (intervals, hills). Your long rides should be done at an easy/medium pace.

E1	Recovery Easy Aerobic Endurance 50 - 60% of max HR	VERY EASY
E2A	Comfortable Extensive Aerobic Endurance Steady, controlled, comfortable, efficient form 60 - 70% of max HR	EASY STEADY STATE
E2B	Comfortable/Uncomfortable Intensive Aerobic Endurance Strong, solid, controlled effort, not hammering 75% of max HR	MEDIUM
E3	Stressful/Hard Maximal Aerobic Endurance Just under threshold 80% of max HR	HARD
AT	Very Stressful Anaerobic Threshold 80 - 90% of max HR	VERY HARD
MAX	Anaerobic Maximal VO2 Max 90-100% of max HR	ALL OUT

HEART RATE TEST

This is best completed indoors on a stationary bike or turbo trainer. It can also be useful to have someone run the test for you so that you can focus on your effort rather than reading numbers. Ensure that this is completed at the start of your programme when you are fully rested.

EQUIPMENT : Heart rate monitor, turbo trainer.

THE TEST :

Warm up : 10 minutes

Main test : 10mins time trial at max consistent effort. The last minute is flat out maximum effort, with a full on sprint for the last 30 seconds. This is where you take your heart rate reading. Note that as soon as you stop the effort, your heart rate will spike slightly before starting to drop.

Cool down : 10mins easy spin down

Once you have your max heart rate you can work out the percentages for the training zones from the chart on the left.

Note that heart rate can be effected by many external factors. Tiredness can cause your heart rate to be elevated, if you have completed a hard training block and are fatigued, your heart rate will be lower. Weather can also be a factor, higher in hot weather and lower in cooler conditions.

During a longer workout, heart rate will not stay stable for the same intensity and will tend to progressively rise due to cardiac drift. Heart rate is very slow to respond to changes in pace, it may take several minutes for heart rate to rise to the expected level. This can make certain interval workouts hard to accurately pace using heart rate.

STRENGTH TRAINING SESSIONS

These training sessions can be completed at home with bodyweight or if you have weights available then feel free to add them in. As are training for strength on the bike, and you need to train the following day, we are working with high reps low weights. Remember to warm up prior to commencing any strength work with either a 10min easy spin on the bike, jog or row. Focus on form at all times, core must be engaged (think draw belly button to spine as a simple cue). If in doubt please seek the help of an exercise professional for your workouts.

STRENGTH 1	STRENGTH 2	STRENGTH 3
WARM UP 10mins on stationary bike or treadmill	WARM UP 10mins on stationary bike or treadmill run	WARM UP 10mins on stationary bike or treadmill run
MAIN Reps 21 of each (rest 2mins), 16 reps of each (rest 2mins), 9reps of each. <ul style="list-style-type: none"> • Squats (feet hip width) • Side step up left leg • Side step up right leg • Push ups (from knees of feet) • Sumo Squats (feet wide apart) • Single leg static lunge left leg forward • Single leg static lunge left right forward 	MAIN SET 60secs on 20secs off x sets <ul style="list-style-type: none"> • Static lunge right • Static lunge left • Squats (feet hip width) • Bulgarian split squat (right foot up on step) • Bulgarian split squat (left foot up on) • Wall hold (back to the wall, legs at right angles) • Plank holds 	MAIN SET Set one 2 x : 5 x squat jumps, 10 x single leg squats, 10 x squats, 10 x bridge pulses (raising up and down) 5mins rest Set Two 2 x : 10 x squat jumps, 20 x step ups, 20 x alternating lunges, 10 x single leg bridges pulses left leg, 10 x single leg bridges pulses right leg.
